

FOR IMMEDIATE RELEASE

Dresser Wayne Reaches Another Data Security Compliance Milestone

AUSTIN, TX (July 17, 2008) – Dresser Wayne, a global marketer of retail fuel dispensers and technologies, announced today that its Nucleus® Point of Sale Base 19 software has achieved Visa Payment Application Best Practices (PABP) compliance validation. The validation was performed by Trustwave, the leading provider of on-demand data security and payment card industry compliance management solutions to global businesses and organizations. Through the rigorous review process required by Visa and the Payment Card Industry Data Security Standard (PCI DSS), Dresser Wayne successfully demonstrated that the Nucleus Point of Sale Base 19 solution is compliant with regulatory specifications.

Coming shortly after Dresser Wayne's successful beta installation in Canada of the PCI-compliant iX™ Pay secure payment solution, the Visa PABP certification represents the next step in Dresser Wayne's continued efforts to help fuel retailers establish compliance with evolving data security requirements.

“Achieving this validation is an important win for current and future Nucleus POS system customers,” states Tom Chittenden, systems product manager for Dresser Wayne. “It delivers PCI security compliance at the POS system, and combined with our Enterprise Management solution, it can be securely configured and managed from a remote location while remaining in compliance. It is one less issue fuel retailers need to worry about.”

Visa's PABP applies to software vendors who develop payment applications that store, process, or transmit data as part of authorization or settlement. The annual on-site review consists of 14 PABP requirements. These mandates include card holder data protection, secure passwords, wireless transmission protection, sensitive traffic encryption over public networks and more.

The Visa PABP validation is part of Dresser Wayne's commitment to providing fuel retailers with advanced security so retailers can better serve consumers and protect equipment investments as standards evolve over the coming years. Dresser Wayne's iX Pay secure payment solution

for retail fuel dispensers was the first and only product of its kind to obtain PCI Encrypting PIN Pad Version 2.0 certification. The solution was also the first to receive Canada's Interac Association Chip PED Technical Specifications and Testing Requirement Version 2.0 certification under Interac's newly-defined category of unattended terminals. Consequently, iX Pay secure payment is the only solution that can be upgraded to meet future Unattended Payment Terminal (UPT) security standards extending beyond current PCI compliance deadlines of January 2009 for new fuel dispensers and July 2010 for existing dispensers.

"Payment security regulatory compliance is a major concern for our customers right now," Tim Weston, Dresser Wayne product manager for payment technologies explains. "We are focused on easing the transition to compliant systems by offering scalable technology that will stay in-step with developing regulations from multiple organizations."

About Dresser, Inc.

Dresser, Inc. is a leader in providing highly engineered infrastructure products for the global energy industry. The company has leading positions in a broad portfolio of products including valves, actuators, meters, switches, regulators, piping products, natural gas-fueled engines, retail fuel dispensers and associated retail point of sale systems and air and gas handling equipment. Leading brand names within the Dresser portfolio include Dresser Wayne® retail fueling systems, Waukesha® natural gas-fired engines, Masoneilan® control valves, Mooney® regulators, Consolidated® pressure relief valves, and Roots® blowers and rotary gas meters. It has manufacturing and customer service facilities located strategically worldwide and a sales presence in more than 100 countries. The company's website can be accessed at www.dresser.com.

About Dresser Wayne

Dresser Wayne, headquartered in Austin, Texas, is one of the largest business units of Dresser, Inc., and is an industry pioneer for the retail fueling industry. Among its innovations, Dresser Wayne was the first to introduce self-service consoles and fuel blending dispensers to service stations, in-pump card readers and cash acceptors, in-pump radio frequency identification payment systems and dispenser-mounted touch screen payment/communication systems. In addition, Dresser Wayne designs and markets software systems that enable its retail fueling customers to manage the convenience store aspects of their businesses more efficiently, including inventory control, price book management, labor management and site administration. The Dresser Wayne website is www.dresserwayne.com.

About Trustwave
